Moldings Disposition

The suggested dispositions will apply to all profiles

1 Starter strip

2 Vertical transition trim

3 Inside corner or QJ

4 Inside corner with integrated J Trim

5 Outside corner with integrated J Trim

6 Outside corner

7 Horizontal transition trim

8 Extended J trim

9 J trim

10 Drip flashing

11 Extended drip flashing

12 Double drip flashing

Approximate manufacturing tolerances :
1/16" on all lengths
1 degree on bend angles

No. M10SHWP (HWP, HW & HWB)

Starting strip

No. M10S14 (MS14)

Starting strip

No. M10D (NW & NWM)

Starting strip

No. ABRA2 (HW)

Braquette de
soutènement arrière

STARTING STRIP

Starter strip, used as an initial anchor point for panel installation. Placed at the bottom of the wall, it ensures perfect alignment of the first row and a stable base for the rest of the cladding. It facilitates water drainage by maintaining a slight gap with the installation surface.

REAR RESTRAINING BRACKET

The rear support bracket acts as a reinforcement support when installing on large surfaces.

- **HARRYWOOD PLUS**
- **HARRYWOOD PLUS BLOCK**
- **NORWOOD & NORWOOD MINI**

J TRIM

Essential finishing mouldings are used to frame openings, ends, and tops of a wall. They provide a clean finish and protect exposed panel ends, while facilitating the expansion and contraction of materials.

No 1 - J Trim

Ideal for applications where only one side is visible. Colored on one side.

No 2 - J Double trim

Moulding coloured on both sides is used when both sides of the moulding are visible.

No 3 - Extended J trim with variable pallet, as needed

Designed to cover the required surface area as needed. Colored on both sides.

No. M01C ((HWP, HW, HWB & MS 14)
J Trim

No. M01D (NW & NWM)
J Trim

No. M03C ((HWP, HW, HWB & MS 14)
Extended J trim (2 pieces)

No. M03D (NW & NWM)
Extended J trim (2 pieces)

No. M22C (HWP, HW, HWB & MS 14)
Inside corner or QJ

No. M22D (NW & NWM)
Inside corner or QJ

INSIDE CORNER OR QJ

QJ moulding has the same functions as J moulding, but is most frequently used as an inside corner.

No. M50CD (HWP, HW, HWB, MS 14, NW & NWM)
Drip flashing

No. M53CD (HWP, HW, HWB, MS 14, NW & NWM)
Drip flashing

DRIP FLASHING

Installed at the base of walls or above openings, drip moulding directs water away from the cladding to prevent infiltration and moisture damage.

Designed with an integrated slope, it ensures efficient drainage while providing a clean finish.

Please note that only double or extended variable drip flashings are colored on both sides.

No. M56CD (HWP, HW, HWB, MS 14, NW & NWM)
Extended drip flashing w/variable

No. M52CD (HWP, HW, HWB, MS 14, NW & NWM)
Extended drip flashing w/variable

- HARRYWOOD PLUS
- HARRYWOOD PLUS BLOCK
- NORWOOD & NORWOOD MINI

OUTSIDE CORNER

OUTSIDE CORNER WITH INTEGRATED J TRIM

The Exterior Corner with Integrated J is designed to receive and conceal panel ends in an integrated J on both sides. It allows quick installation and ensures a clean, uniform finish.

OUTSIDE CORNER

The two-piece outside corner includes a mounting base and a cover piece, which are installed last. Ideal for masking cuts and facilitating post-installation adjustments, it offers an aesthetic finish and simplified access when needed.

No. M20D (NW & NWM)

Outside corner with integrated J Trim

No. M20C ((HWP, HW, HWB & MS 14)

Outside corner (2 pieces)

No. M12C ((HWP, HW, HWB & MS 14)

Vertical transition trim (2 pieces)

No. M13C ((HWP, HW, HWB & MS 14)

Horizontal transition trim (2 pieces)

No. M13D (NW & NWM)

Vertical transition trim (2 pieces)

TRANSITION TRIM

Horizontal and vertical transition mouldings create a clear separation between two types of cladding (such as brick and steel) or between two areas of the same profile, particularly when installing over long lengths. It facilitates transitions by ensuring precise alignment and allowing controlled expansion of materials.

It can also be used as a subsidence moulding, particularly for vertical installation. Allowing materials to expand.
