For placing an order for a curved MS 1 profile project, there are 2 possible options

Choice N°1

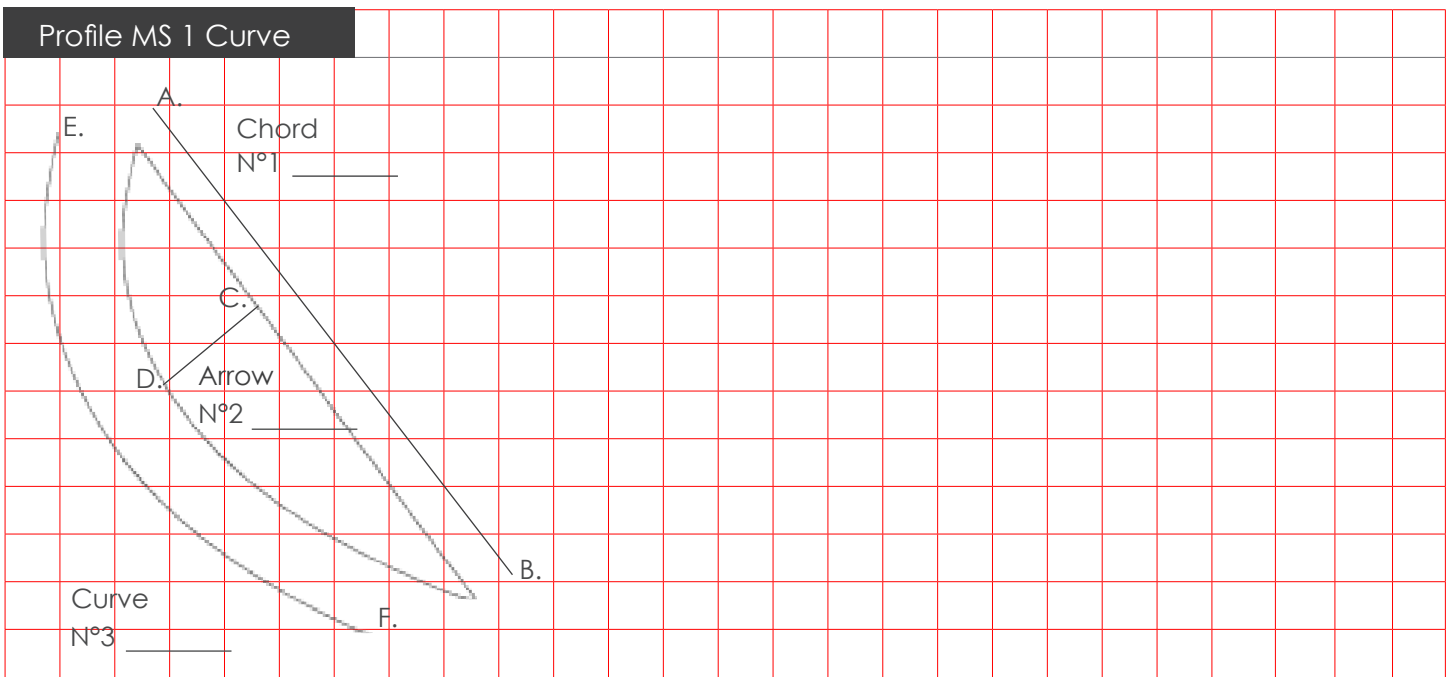

Provide the three following measurements:

1. The chord measurement (i.e. the measurement between the points where the curve begins and ends) in the illustration below from point A to point B
2. The arrow measurement (i.e. the measurement between the deepest point of the curve and the furthest point on the chord), from point C to point D
3. Curve length measurement (i.e. the measurement between the beginning and end of the curve), i.e. from point E to point F.

Choice N°2 (strongly recommended)

1. Send us a piece of Styrofoam or plywood representing the exact curve you want.
